

HYPERVAULT

Intelligent Android Storage, Security & Mobility Ecosystem

ANURAG VERMA
SHASHANK MISHRA

ASKIPLEX Technologies

Founder & Company Overview

Anurag Verma

- 25+ years in Enterprise Storage, Replication & Security Technologies
- Senior Principal Engineer across Broadcom, Symantec, Veritas & QLogic
- 3 Granted US Patents
- 6 Patent Applications Filed for HyperVault
- B.E (Computer Science) IIT Roorkee
- Executive MBA, SIBM Pune

HyperVault

An intelligent Android platform built on five core technology pillars:

- Content-centric Storage
- Duplicate Virtualization
- Contextual Security & Access Control
- Wearable-Aware Authentication
- Context-aware Data Mobility

Agenda

- 01 Problem
- 02 HyperVault – Architecture
- 03 HyperVault – Platform Intelligence Capabilities
- 04 HyperVault – Competitive Advantages
- 05 HyperVault – Product Line
- 06 HyperVault – Intellectual Property Portfolio
- 07 HyperVault – Business Model
- 08 HyperVault – Market Opportunity
- 09 HyperVault – Customer Segments & Channels
- 10 HyperVault – Current Progress
- 11 HyperVault – Funding Requirement
- 12 HyperVault – Financial Projections

Problem: Mobile Data, Security, Transfer and Authentication Are Isolated

Ecosystem Layer	Fundamental Architectural Failures
Data Management	• No content-centric abstraction layer for organizing content. • Content discovery degrades as data volumes grow. • Duplicate copies continue consuming storage indefinitely • Duplicate files cleanup risks irreversible data loss.
Data Security	• Security is achieved through file relocation, hiding or isolation • Gallery visibility and MediaStore continuity are broken • Users are forced to choose between protection and usability
Data Transfer	• Transfers move files only and not content relationships. • Duplicate copies are recreated across devices • Transfer applications have no awareness of vaults, protected content or security policies.
Authentication	• Authentication operates independently of security policies and protected content. • Authentication is treated as a one-time event rather than a continuous process. • Authentication relies on device state rather than user presence.

Problem: Research Insight

Existing Solutions Solve Individual Problems, Not The Missing Architecture

Layer	Representative Players	What They Solve	What's Still Missing / Broken
Data Management	Files by Google , Solid Explorer , CX Explorer	File storage and navigation	No content-centric abstraction layer. Duplicate cleanup remains destructive.
Data Security	KeepSafe , Vault , Calculator Vault	File protection	MediaStore continuity and application workflows remain broken.
Data Transfer	SHAREit , Quick Share , Nearby Share	File movement	Content relationships, security policies and organization are not preserved.
Authentication	PIN, Password, Fingerprint, Face Unlock	Identity verification	Trust remains non-continuous, non-contextual and device-centric.

Despite mature products across storage, security, transfer and authentication, the architecture remains fragmented because no shared intelligence layer exists between these systems.

HyperVault – The Missing Intelligence Layer

“

HyperVault introduces a **Contextual Intelligence Layer** that unifies data management, security, transfer and authentication into a single intelligent ecosystem

Content-centric Storage

Duplicate Virtualization

Contextual Security & Access Control

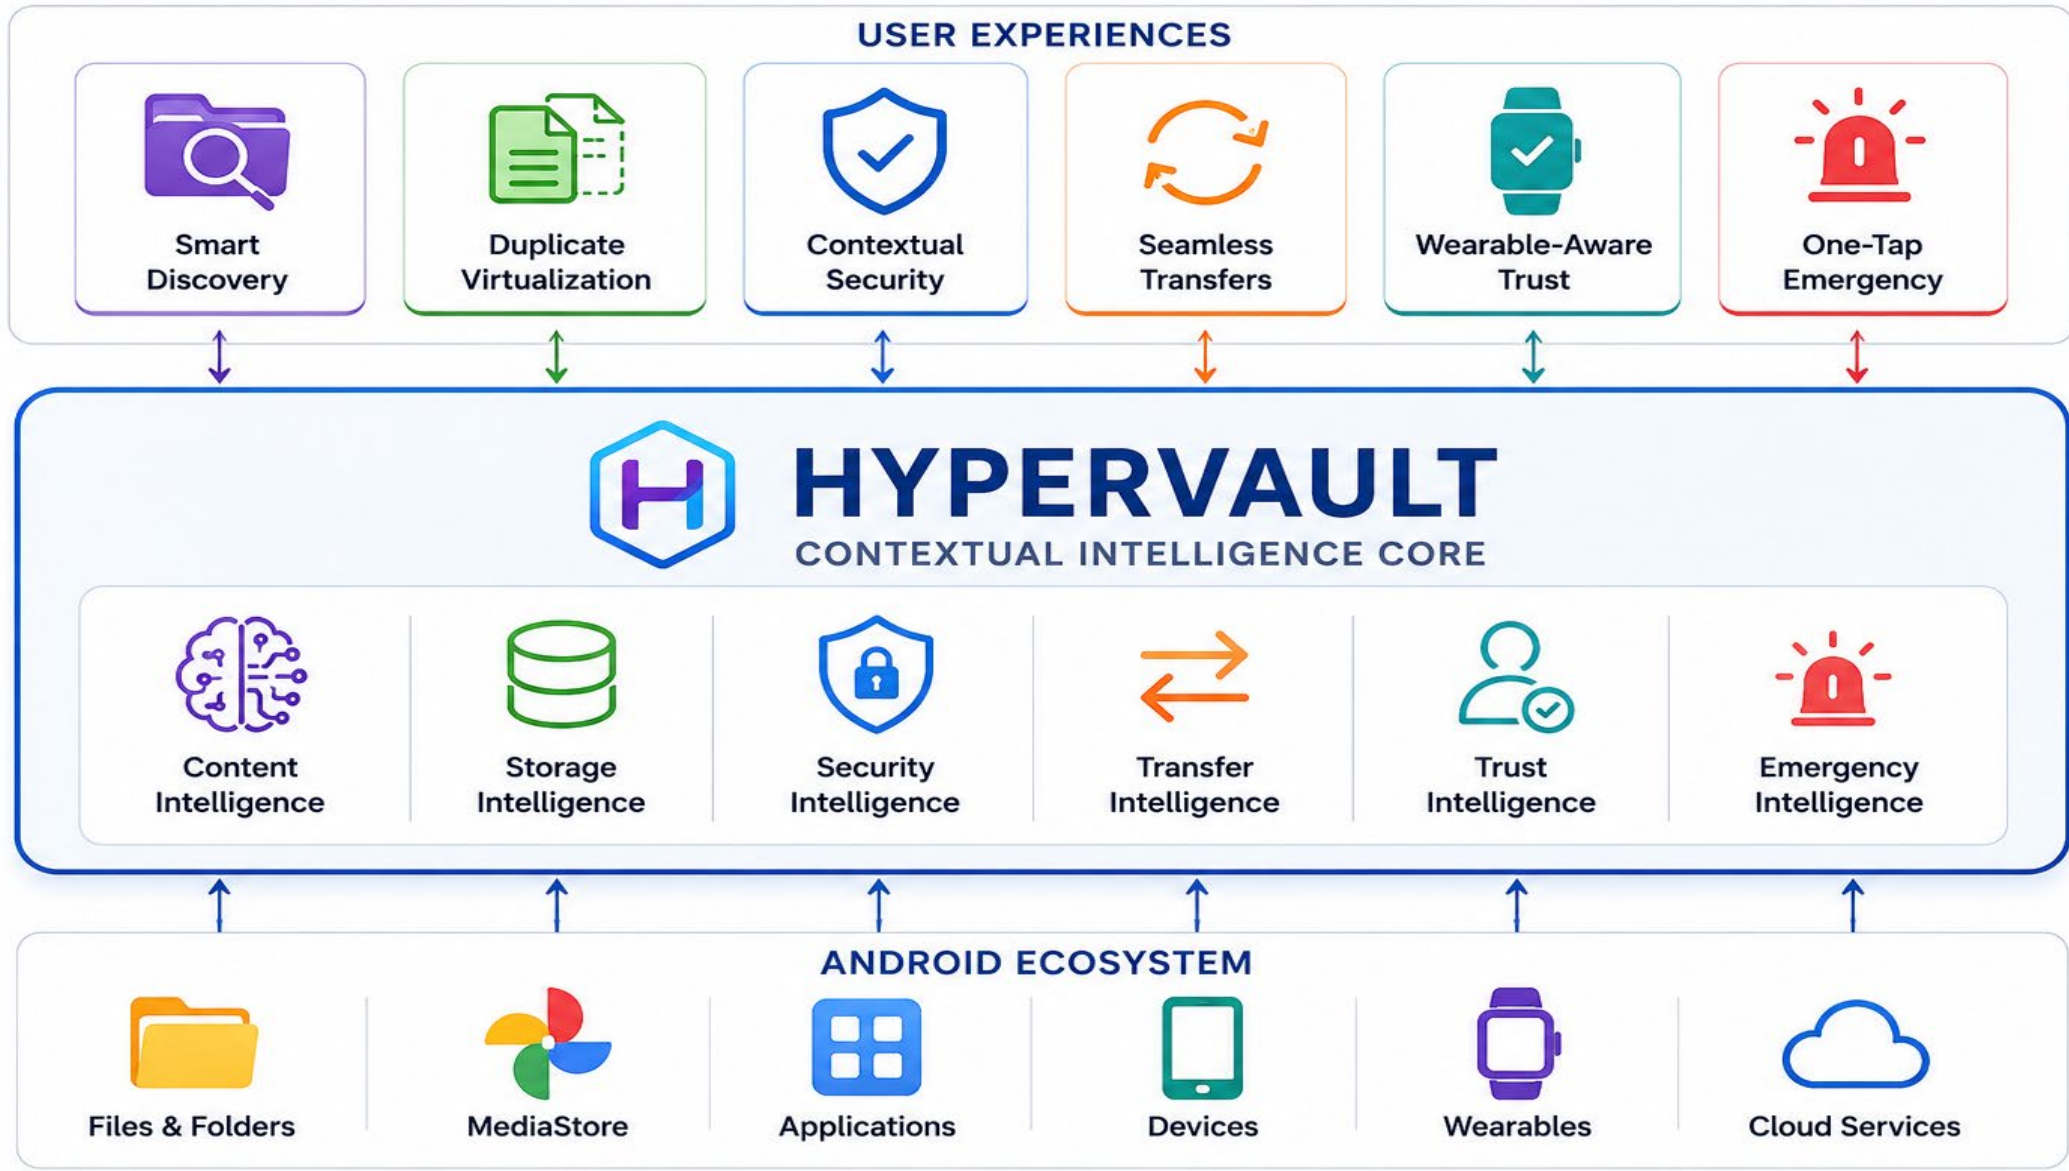

Wearable-Aware Authentication

Context-aware Data Mobility

HyperVault – Architecture

HyperVault – Platform Intelligence Capabilities

Capability Domain	HyperVault Capabilities
Content Intelligence	Category-aware Exploration, App-aware Organization, Time-aware Discovery, Logical Group-aware Navigation
Storage Intelligence	Duplicate Virtualization, Non-Destructive Storage Optimization, Shared Content Intelligence
Security Intelligence	Contextual Security, MediaStore-aware Protection, Logical File Continuity Preservation
Transfer Intelligence	Security-aware Migration, Duplicate-aware Synchronization, Context-preserving Transfers
Trust Intelligence	Presence-aware Authentication, Wearable-aware Trust, Context-aware Access Decisions
Emergency Intelligence	One-tap Emergency Activation, Wearable-triggered Emergency Response, Intelligent Emergency Notifications

HyperVault – Why Users Adopt HyperVault

What Users Want	HyperVault Delivers
Find content faster	Discover content by category, application, time and context
Reduce storage waste	Optimize storage without deleting user files
Eliminate duplicate clutter	Virtualize duplicate content without permanent data loss
Secure content without inconvenience	Protect content without breaking gallery and application workflows
Avoid repetitive authentication	Continuous trust based on presence and context
Move content without losing organization	Preserve content relationships during transfers
Protect sensitive content automatically	Context-aware security and access control
Access content the way it was organized	Preserve logical content continuity across devices
Get help quickly during emergencies	One-tap emergency activation and automated communication
Avoid switching between multiple apps in emergencies	Automated evidence collection, location sharing and notifications
Reduce dependency on passwords and PINs	Wearable-assisted authentication and trust
Stay protected while keeping content accessible	Security without hiding, relocating or isolating files

HyperVault – Competitive Advantages

Architectural Capability	File Manager Apps	Vault Apps	Transfer Apps	HyperVault
Content-centric Exploration	Partial	No	No	Full
Non-destructive Duplicate Virtualization	No	No	No	Full
Non-disruptive Contextual Security	No	No	No	Full
Context-preserving Transfers	No	No	Partial	Full
Wearable-aware Authentication	No	No	No	Full
Wearable-triggered Emergency Intelligence	No	No	No	Full

HyperVault – Competitive Landscape Analysis

Ecosystem	Existing Solutions	Key Limitation	HyperVault
File Managers	Files, Solid Explorer	Folder-centric exploration	Content-centric exploration
Duplicate Management	Cleaner Apps	Destructive cleanup	Duplicate virtualization
Security & Vault Apps	Keepsafe, Secure Folder	Break MediaStore continuity	Logical continuity preservation
Authentication	PIN, Biometrics	Repetitive authentication	Continuous wearable-aware trust
Wearable Ecosystems	OEM wearable systems	No trusted emergency intelligence	Wearable-aware emergency systems
File Transfers	SHAREit, FTP, Cloud	Fragmented transfers	Context-aware transfers
Content Organization	Gallery/category apps	No contextual intelligence	Content-centric organization

HyperVault – Product Line

Three Product Lines. Built on One Unified HyperVault Platform

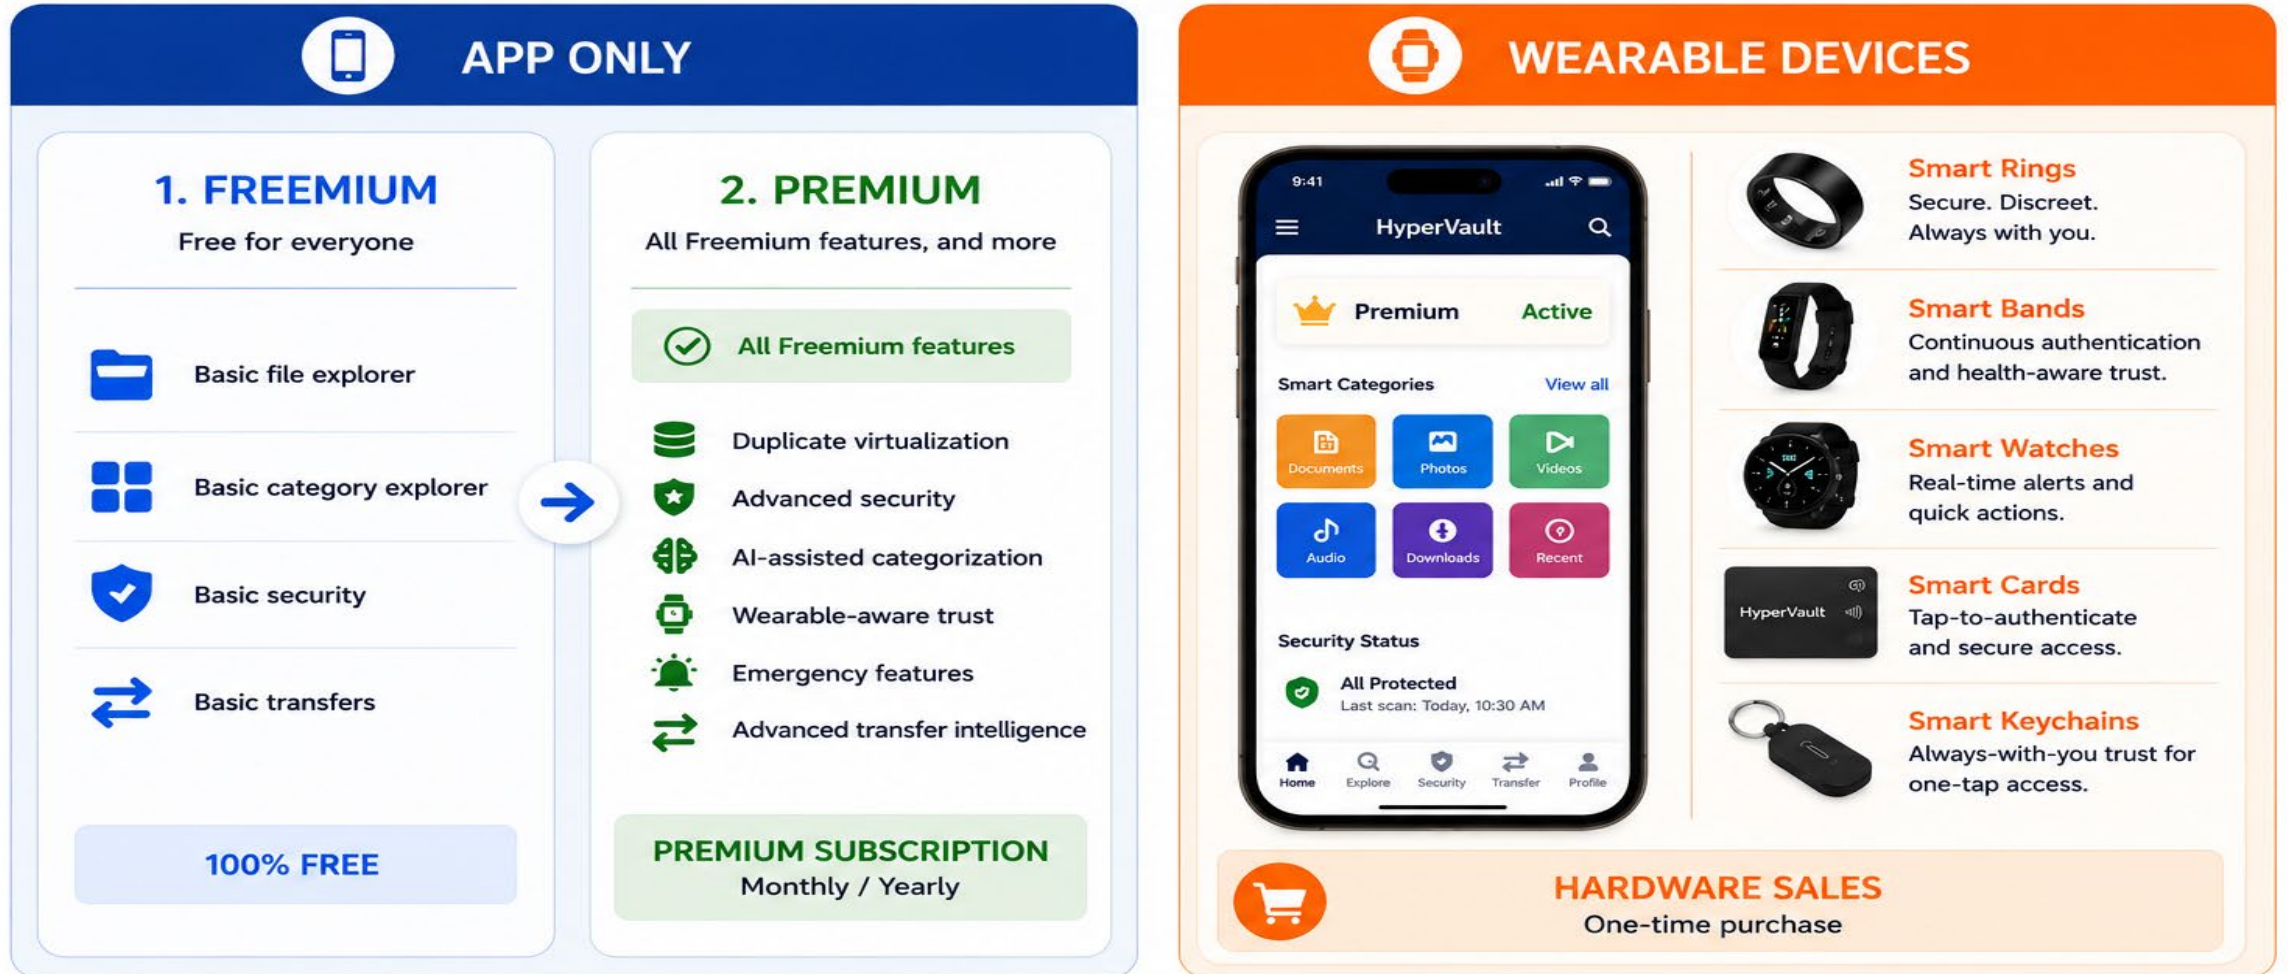

HyperVault – Intellectual Property Portfolio

Patent Domain	Patent Type	Title	Application No.
Platform Intelligence	Provisional	System and Method for Intelligent Secure Data Management, Duplicate Virtualization, Wearable Authentication, and Smart Transfer	2026-2106-4901 (India)
Storage Intelligence	Provisional	System and Method for Intelligent Non-Destructive Shared-Storage Duplicate Virtualization Using Logical Stub References	2026-2106-6923 (India)
Security Intelligence	Provisional	System and Method for Non-Disruptive Contextual Secure File and MediaStore Management	2026-2106-6926 (India)
Trust & Emergency Intelligence	Provisional	System and Method for Wearable-Aware Continuous Trust, Contextual Secure File and MediaStore Access, and Emergency Communication	2026-2106-6927 (India)
Transfer Intelligence	Provisional	System and Method for Contextual State-Preserving File and MediaStore Transfer	2026-2106-6932 (India)

The portfolio protects HyperVault's key differentiators across storage, security, authentication, transfer and contextual intelligence technologies.

HyperVault – Business Model

Two Revenue Streams. One Unified Ecosystem

Free app to get started.

Premium to unlock everything.

Wearables to elevate trust.

HyperVault – Market Opportunity

HyperVault operates at the convergence of intelligent mobile software, wearable authentication, emergency intelligence and future health ecosystems

Software Market Opportunity

- Android powers 60%+ of the global smartphone market
- 3B+ active Android devices worldwide
- 1.2+ Billion smartphones shipped annually
- Billions of users manage growing volumes of photos, videos, documents and application data
- Growing storage, privacy and multi-device complexity
- Rising duplicate content and storage inefficiencies
- Increasing demand for secure mobile ecosystems
- Increasing cross-device file and media interactions
- Growing demand for privacy-focused mobile experiences
- Fragmentation between storage, security, transfer and authentication remains unresolved

Wearable Market Opportunity

- Smart Ring market projected at 22.5% CAGR through 2033
- Wearable technology market projected to exceed USD 229B by 2033
- Growing demand for safety and emergency wearables
- Increasing adoption of continuous monitoring ecosystems
- Rapid growth in smart rings, bands and watches
- Aging populations driving wearable adoption
- Increasing demand for health and wellness monitoring
- Wearables evolving into trusted authentication platforms
- Growing preference for lightweight, always-available wearable devices

HyperVault – Customer Segments & Channels

Core Android Users

- Android power users
- Privacy-conscious users
- Multi-device users
- Storage-intensive users
- Content creators
- Developers & Technology Professionals
- Mobile Professionals

Safety & Wearable Users

- Women safety users
- Senior Citizens
- Parents
- Health & Wellness users
- Field workers
- Solo travelers
- Public Safety Personnel

Go-To-Market Channels

- Google Play ecosystem
- Android productivity communities
- Creator and influencer partnerships
- Technology review channels
- Safety awareness programs
- College and university outreach
- Wearable ecosystem partnerships

HyperVault – Current Progress

Area	Status
Company Registration	Completed
Startup India Recognition	Completed
Google Play Developer Account	Completed
Core Product Development	In-Progress
Core Platform Architecture	In-Progress
Patent Applications	5 Filed
Play Store Release	Preparation Underway
Github	HyperVault Landing Page

HyperVault – Funding Requirement

Funding Requirement:

- **₹2.5–3 Crore**
- Seed Funding
- Equity-based investment
- Development Runway: 24 - 30 months.

Primary Focus:

- Product Engineering
- Embedded Systems Development
- Hardware Prototyping
- Ecosystem Integration

Note:

- *Allocation primarily covers product engineering, embedded systems development, hardware prototyping, and ecosystem integration activities.*
- *Marketing, sales, manufacturing scale-up, and GTM expansion are planned under future growth-stage funding.*

HyperVault – Roadmap & Fund Utilization

Phase	Phase Title	Allocation	Major Deliverables
Phase 1	Category Exploration & Duplicate Virtualization	20%	Content-Centric Explorer, Duplicate Virtualization
Phase 2	Category Security & Vault Infrastructure	10%	Contextual Security, Vault Infrastructure, Access Control Infrastructure
Phase 3	Category Mobility & Transfer Infrastructure	15%	Context-Preserving Transfers, Synchronization Infrastructure
Phase 4	Emergency Communication Infrastructure	10%	Emergency Activation, Evidence Collection, Notification Platform
Phase 5	Wearable Software Development	15%	BLE Services, Authentication Services, Smart Ring Firmware
Phase 6	Smart Ring Hardware Development	20%	Hardware Platform, Sensor Integration, Prototype Validation
Phase 7	Health Intelligence & Monitoring Platform	10%	Health Monitoring, Analytics Engine, Insights Dashboard

The portfolio protects HyperVault's key differentiators across storage, security, authentication, transfer and contextual intelligence technologies.

HyperVault – Commercialization & Roadmap

Phase Next - Ecosystem Expansion Roadmap

Stage 1

Free Application Ecosystem

- Free Android Application
- Google Play Distribution
- User Acquisition & Product Validation
- Community Building & Feedback Loop

Revenue:
Free / Freemium

Stage 2

Premium Subscription Ecosystem

- Duplicate Virtualization
- Contextual Security
- Vault Infrastructure
- Emergency Communication
- Advanced Transfer Infrastructure

Revenue:
Premium Subscription
₹99/month or ₹999/year

Stage 3

Smart Wearable Ecosystem

- Smart Ring Launch
- Wearable Authentication
- Emergency Trigger Services
- Health Monitoring Platform

Revenue:
Hardware Sales

HyperVault – Financial Projections

Year / Timeline	Key Deliverables	Spend (₹)	Revenue (₹)	Outcome
Year 1 (0–12m)	Phase 1–2: Category Exploration, Duplicate Virtualization, Security & Vault	90L	0	Prototype validated, pilot ready
Year 2 (12–24m)	Phase 3–4: Transfer Infrastructure + Emergency Communication	60L	20L	Product feature-complete, premium subscriptions start
Year 3 (24–36m)	Phase 5–6: Wearable Software + Smart Ring Hardware	1.05Cr	1Cr	Hardware pilot sales + subscription growth
Year 4 (36–48m)	Phase 7: Health & Monitoring Infrastructure	45L	3Cr	Ecosystem expansion, Commercial Launch & Growth Funding Readiness

Assumptions:

- 50,000 active users by Year 4
- Freemium Android user growth
- 5–7% premium conversion
- Smart Ring pilot launch in Year 3
- Subscription and wearable revenue combined

HyperVault – Leadership Team

FOUNDING LEADERSHIP

ANURAG VERMA
FOUNDER, CEO & CTO

Owns product vision, Android architecture, encryption strategy, and AI security roadmap.

Product Vision + Technical Architecture

SHASHANK MISHRA
CO-FOUNDER & COO

Leads operations, execution, partnerships, GTM planning, and scalable business processes.

Execution + Operating Scale
