

Askiplex Technologies

Company Introduction, Mission & Vision

1. Company Introduction

Askiplex Technologies is a mobile security and intelligent data infrastructure company building next-generation solutions for personal and professional data protection. Our flagship platform, **HyperVault**, is an Android-native ecosystem designed to organize, encrypt, optimize, authenticate, and transfer mobile data through one unified experience.

Today, users depend on multiple disconnected apps for file browsing, duplicate cleanup, vault security, file sharing, and device authentication. **HyperVault** brings these fragmented workflows together into a single intelligent platform using app-aware, category-aware, duplicate-aware, wearable-aware, and context-aware security intelligence. Askiplex Technologies is focused on creating technology that makes mobile data organized, encrypted, accessible, and protected without disrupting the way people naturally use their smartphones.

2. Mission

Our mission is to protect and simplify mobile data by creating intelligent security ecosystems that automatically organize, encrypt, optimize, authenticate, and transfer information across smartphones, apps, wearables, and trusted devices.

3. Vision

Our vision is to become the trusted intelligence layer for mobile data security — where every file is easy to find, securely encrypted, safely transferred, intelligently optimized, and protected by context-aware trust.

Secure by Design

Intelligent by Context

Trusted Everywhere

Built for People

Organize. Encrypt. Optimize.
Authenticate. Transfer. All in HyperVault.

The Problem With Today's Apps

Mobile Storage Is Fragmented

1. Users Face:

- Files scattered across apps and folders
- Manual search and repetitive cleanup
- Duplicate files consuming storage
- Vault apps that break normal workflows
- Weak or repetitive authentication
- Slow and disconnected file transfers

2. Ecosystem Gaps:

- No app-aware organization
- No category-aware file intelligence
- No wearable-aware authentication layer
- No non-destructive duplicate management
- No unified cross-platform transfer system

Simple Explanation

Current apps solve one small problem at a time.

HyperVault solves the full mobile data lifecycle:

find, organize, secure, clean, authenticate, and transfer.

Current Scenario

Fragmented. Disconnected. Inefficient.

Multiple tools. Manual work. Lost time. Risky data.

HyperVault Difference

Unified. Intelligent. Secure.

One platform. One workflow. Total control. Total peace of mind.

Secure by Design

Intelligent by Context

Trusted Everywhere

Built for People

Organize. Encrypt. Optimize.
Authenticate. Transfer. All in HyperVault.

Solution / Technology

HyperVault Makes Mobile Context-Aware

Context-Aware Intelligence

HyperVault adds intelligence to mobile storage instead of treating every file as a generic object.

It understands:

- What the file is
- Where it came from
- How sensitive it may be
- Whether it is duplicated
- Whether it should be encrypted
- How it should be transferred

From generic files → intelligent mobile context

Five Intelligence Layers

App-aware organization

Source apps like WhatsApp, Telegram, Gmail, Camera

Category-aware encryption

Protect PDFs, docs, media, screenshots

Duplicate-aware optimization

Reduce clutter without destructive deletion

Wearable-aware authentication

Trusted ring/watch proximity for secure access

Cross-platform mobility

Move secure files across devices and browsers

Automatically organize, protect, clean, and move files based on real-life mobile behavior.

Smart sorting

Fast search

All file categories

Secure mobile browsing

Files flow from WhatsApp, Telegram, Gmail, Camera, Downloads, and social apps into one secure mobile workspace.

Impact Line: HyperVault understands mobile data the way users actually experience it — by app, category, sensitivity, trust, and action.

Secure by Design

Intelligent by Context

Trusted Everywhere

Built for People

Organize. Encrypt. Optimize.
Authenticate. Transfer. All in HyperVault.

Intelligent File Explorer

From Folder Browsing to Smart File Discovery

Current File Explorer Problem

- Folder-centric navigation
- Users must remember file locations
- Manual search through multiple folders
- App-generated media remains scattered

HyperVault Difference

- One-tap exploration by type or source
- PDFs, videos, Office docs, screenshots
- WhatsApp / Telegram / Camera views
- Large-file and date-based categories

Simple Explanation

Instead of asking users to remember where a file is saved, HyperVault understands what the file is, where it came from, and what should happen next.

⚡ One-tap categories

🔍 Fast discovery

📱 App-based views

📁 Large-file finder

Secure by Design

Intelligent by Context

Trusted Everywhere

Built for People

Organize. Encrypt. Optimize.
Authenticate. Transfer. All in HyperVault.

Intelligent File Transfer

Secure, App-Aware, **Category-Aware** Transfer

The Problem Today

- Users rely on USB, browser uploads, cloud links, FTP, and third-party transfer apps
- Transfer workflows stay fragmented, inconsistent, and insecure
- Repeated sharing creates duplicate clutter and storage confusion
- Current systems ignore file category and app context

HyperVault Difference

- Transfer by category: PDFs, Office files, secure vault files, and media groups
- Transfer by app source: WhatsApp, Telegram, Camera, Office attachments
- QR-based trusted device pairing across mobile, browser, and server targets
- Duplicate-aware payload transfer avoids bloat while preserving context

Simple Explanation

Instead of sending random files one by one, users can transfer meaningful groups — like all PDFs, all WhatsApp media, or all secure vault files — while avoiding duplicate bloat.

- Secure transfer by category and app source

HyperVault does not just move files — it moves organized, encrypted, context-aware data.

Mobile-to-mobile

QR pairing

App-aware transfer

Secure payloads

Secure by Design

Intelligent by Context

Trusted Everywhere

Built for People

Organize. Encrypt. Optimize.
Authenticate. Transfer. All in HyperVault.

Duplicate Optimization

Current Duplicate Problem

- Duplicate cleaners ask users to delete extra copies
- Fear of accidental loss and broken workflows
- Repeated forwards create storage clutter
- Users lose trust because cleanup feels risky

128 GB
Used by duplicates

! Multiple copies. More clutter. Lost space.

One real file + smart references = storage saved safely

How HyperVault is Different

- Duplicate virtualization keeps one real payload
- Redundant copies become intelligent stubs or references
- Original paths, visibility, and app continuity are preserved
- Users reclaim space without destructive deletion
- Cleaner storage with stronger user trust

Before

After
with HyperVault

✓

86 GB
(67% saved)

Key HyperVault Features

Duplicate detection

Finds exact and similar duplicates intelligently

Virtualization

Keeps one real copy, creates lightweight references

Storage savings

Recover significant space automatically and safely

Continuity preserved

Files stay accessible across apps, folders, and devices

Secure by Design

Intelligent by Context

Trusted Everywhere

Organize. Encrypt. Optimize.
Authenticate. Transfer. All in HyperVault.

Security & Vault

Contextual Encryption Without Breaking Workflows

Current Vault App Problem

- Manual file-by-file vaulting
- Hidden folders disrupt normal access
- Gallery and app workflows break
- Repeated PIN/password friction

HyperVault Difference

- Automatic rules by category or app
- Secure PDFs, Office files, WhatsApp images
- Context-aware encryption by media and trust
- Trusted wearable unlock or fallback MFA

Simple Explanation

Instead of forcing users to manually hide files, HyperVault applies smart rules based on file type, app source, media type, and trust conditions.

Secure by Design

Intelligent by Context

Built for People

Organize. Encrypt. Optimize.
Authenticate. Transfer. All in HyperVault.

Wearable Trust & Emergency Ecosystem

Security That Understands Trusted Presence

Current Authentication Problem

- PINs, passwords, fingerprints create friction
- Vault apps miss trusted wearable presence
- Emergency workflows require multiple steps
- Contacts, location, and evidence stay disconnected

HyperVault Difference

- Smart ring and smartwatch as trust signals
- Passive wearable authentication and proximity unlock
- One-tap SOS with trusted-contact alerts
- Live location and emergency media sharing

Simple Explanation

A trusted wearable acts like a silent security key. If the user is nearby, access becomes seamless. In an emergency, the wearable can trigger communication, evidence sharing, and location updates.

HyperVault Wearable Trust Layer

Smart Ring Integration

Trusted wearable presence for secure access

Smartwatch Integration

Vault status, SOS, and trusted connection

Passive Authentication

Less friction when a trusted device is nearby

Emergency Workflows

One-tap SOS, trusted contacts, live location

Identity + Safety

Beyond storage: trust, emergency, and protection

Impact Line: HyperVault makes the smartphone vault aware of the person, the device, and the emergency context.

Wearable trust

Proximity unlock

One-tap SOS

Live location sharing

Secure by Design

HyperVault Eco System

One connected ecosystem for mobile data protection

FRAGMENTED MARKET TODAY

File Managers
Basic browsing and organization

Vault Apps
Lock files, limited context

Duplicate Cleaners
Remove duplicates, risk data breaks

Transfer Apps
Move files, limited security

1 Intelligent File Explorer

Find files by type, source, and context

Duplicate Optimization

Save storage without breaking continuity

3 Contextual Encryption

Protect files automatically by rule

4 Wearable Trust

Trusted access with ring or smartwatch

5 Secure File Transfer

Move encrypted across devices

6 Cloud & Enterprise Readiness

Scale to teams, compliance, and partnerships

HYPERVAULT ADVANTAGE

 App-aware organization

 Category-aware intelligence

 Duplicate virtualization

 Logical file continuity

 Secure transfer + wearable trust

 App-Aware

 Category-Aware

 Encrypted

 Wearable-Ready

 Transfer-Ready

Secure by Design

Intelligent by Context

Trusted Everywhere

Built for People

Organize. Encrypt. Optimize.
Authenticate. Transfer. All in HyperVault.

Business Model

Current Scenario

- Most utility apps are one-time downloads
- Ad-driven models with low user value
- Low retention and user drop-off
- Limited monetization potential

How HyperVault is Different

- Freemium app: core storage & security for everyone
- Premium subscription: advanced features & sync
- Pro plan: power-user tools & productivity suite
- B2B licensing: teams, orgs & compliance-ready
- Future: wearable & cloud partnerships expand reach

Key HyperVault Features

Freemium entry

Premium subscription

B2B licensing

Ecosystem upsell

Secure by Design

Intelligent by Context

Trusted Everywhere

Built for People

Organize. Encrypt. Optimize.
Authenticate. Transfer. All in HyperVault.

Market Opportunity & Go-To-Market

Market Opportunity

-  **More mobile data than ever**
Photos, videos, screenshots, PDFs, health records, financial documents, business files, and app-generated media.
-  **Privacy demand is rising**
Users want stronger protection without complicated security workflows.
-  **Android remains fragmented**
Storage, privacy, and transfer are spread across many apps.

Go-To-Market Strategy

-  **1. Play Store Launch**
Direct-to-consumer Android launch for privacy-conscious, storage-cleanup, and productivity users.
-  **2. Professional Expansion**
Healthcare, legal, finance, executives, field services, and remote workforce use cases.
-  **3. Enterprise Expansion**
BYOD security, mobile workforce protection, and secure file distribution.
-  **4. Growth Channels**
App-store optimization, short demo videos, influencer channels, referral incentives, and B2B pilots.

The market is moving from simple storage tools to intelligent personal data infrastructure.

HyperVault enters as a utility app, but scales as a mobile security and storage infrastructure platform.

 **Key Growth Segments**

 **Consumer**
Personal Privacy, Photos & Videos, Family Security, Travel Protection.

 **Professional**
Healthcare, Legal, Finance, Executives, Remote Workforce.

 **Enterprise**
BYOD Security, Mobile Workforce Protection, Secure File Distribution.

 **Scale**
Recurring Subscriptions, B2B Pilots, Ecosystem Expansion.

Competition & Barriers to Entry

CURRENT COMPETITIVE LANDSCAPE

1. File Managers

- Browse files
- No intelligent encryption
- No wearable trust

Limited to browsing.
No intelligence, no protection.

2. Duplicate Cleaners

- Delete copies
- Risk of data loss
- No logical continuity

Destructive by nature.
Broken context.

3. Vault Apps

- Encrypt files
- Break normal workflows
- Move files into hidden storage

Isolates files from normal workflows.
Hard to use.

4. Transfer Apps

- Move files
- No app context
- No security awareness
- No duplicate intelligence

Moves files, not intelligently.
No continuity.

Competitors solve isolated problems.

Why HyperVault Is Different

HYPERVAULT INTEGRATED PLATFORM

BARRIERS TO ENTRY

1

Integrated Architecture

Multiple intelligence layers working together

2

Context Awareness

Understands app, category, sensitivity

3

Duplicate Virtualization

Optimizes storage without destructive deletion

4

Logical Continuity

Files stay discoverable across workflows

5

Wearable Trust Layer

Trusted presence + emergency context

6

Secure Transfer Ecosystem

Context-aware mobility across devices

Secure by Design

Intelligent by Context

Trusted Everywhere

Built for People

Organize. Encrypt. Optimize.
Authenticate. Transfer. All in HyperVault.

HyperVault Leadership Team

FOUNDING LEADERSHIP

ANURAG VERMA
FOUNDER, CEO & CTO

Owns product vision, Android architecture, encryption strategy, and AI security roadmap.

Product Vision + Technical Architecture

SHASHANK MISHRA
CO-FOUNDER & COO

Leads operations, execution, partnerships, GTM planning, and scalable business processes.

Execution + Operating Scale

KEY LEADERSHIP STRENGTHS

VISION

Trusted long-term product direction
